

hi Chris

Hope enclosed is of use to you
Am keeping set between 78-79°
for the first time in several years, I'm able
to close my bedroom window at night without
having to use aspirin or tylenol for headaches
have airborne allergies - your unit is
without question - cleaner

In past years I've kept the thermostat at
same degree but without the same comfort
any lower would be too cold with this unit

Passed & "cleaned the air" with health issues
with the help of excellent care - Now, with
your excellent product and diligent attention
to detail - literally have clean, comfortable
air.

Honesty, decency and superb work ethics come
out on top every time

My best to you and your family with
much appreciation

D 11-22

new R/C - heating units in late July of 2008

Could not ask for a more courteous, honest, efficient business man. He presented options, explained in easily understood words what each did as well as why a "maintenance contract" wasn't needed. Taking the time to show me how to simply drain the outside drip pipe every couple of months along with changing the filter. No hard sell - Even to advising me to get at least 2-3 more quotes to be comfortable in my choice

from initial presentation to installation to follow up to ensure all was working properly, he was consistent in arriving within 30 minutes of estimated arrival time

The County inspector's comment "This is The best work I've ever seen - it's a pleasure to ok this one"

My home feels cleaner, there's less dust, and my allergies have eased up.

I have no concerns on any future servicing
Chris Dombkowski - Progress Air - stands by his
work - stands by his word

A Solid Unit - A Solid Company
